- To determine the association between knowledge, attitude and practice on alcohol drinking among high school adolescents.

RESEARCH METHODOLOGY

- **Study design**

A cross sectional descriptive study

- **Study population**

Students of 10th and 11th grade classes, age 14-16 years, in Mingalardon Township

- **Study area**

The study was carried out at No. (5) Basic Education High School, Mingalardon Township, Yangon.

- **Study period**

from February, 2015 to December, 2015.

- **Sample size determination**

minimum sample size is 177 high school students

Flow chart of study procedure

One of the high school was selected by lottery method

Permission from Township Education Officer and Headmaster

Collection of basic data such as total numbers of students, number of students in each grade, number of section in each grade

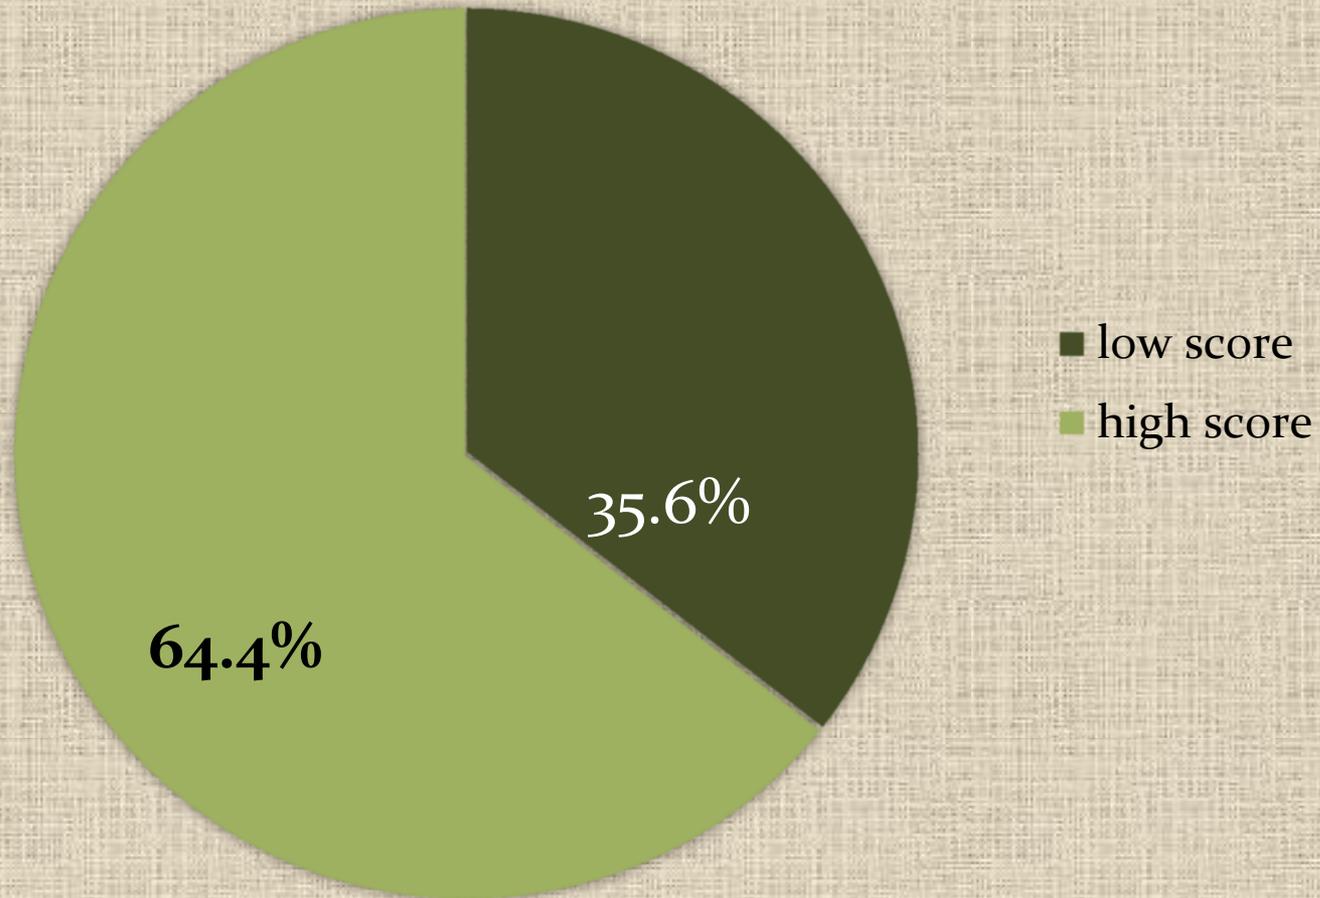

Consent was taken from respondents

Explanation of Questionnaires to Respondents.

The Questionnaire:
Section A: Demographics
Section B: Knowledge related data
Section C: Attitude related data:
Section : Behaviour related data

RESULTS

Distribution of knowledge score

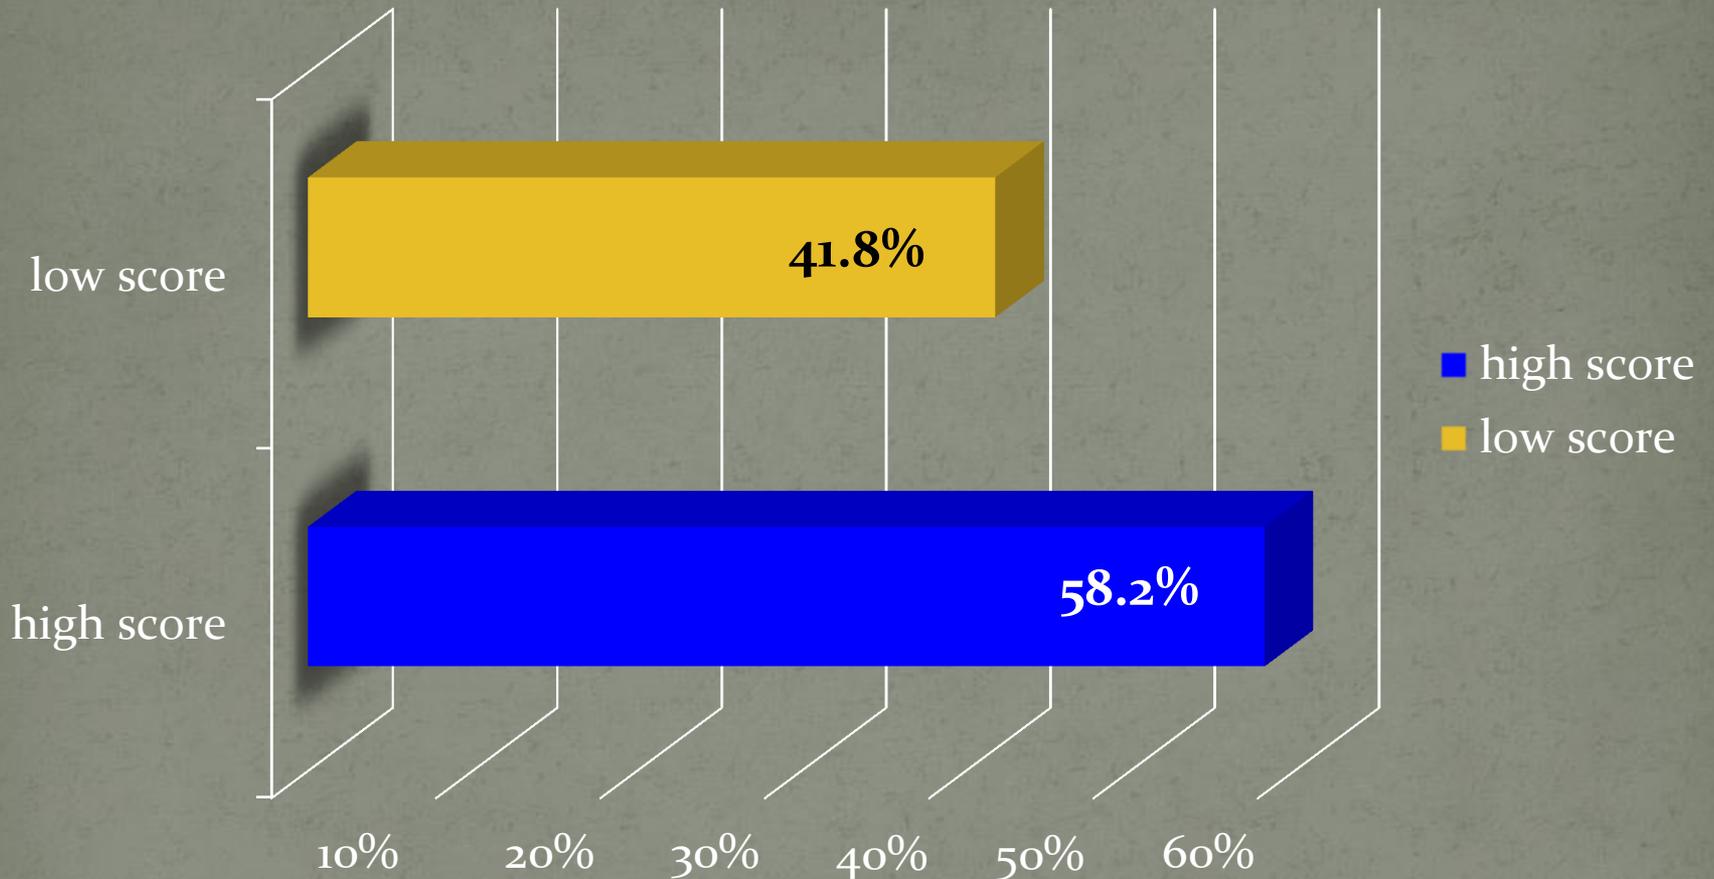

High score = > mean score

Low score = < mean score

mean score (14)

Distribution of Attitude Score

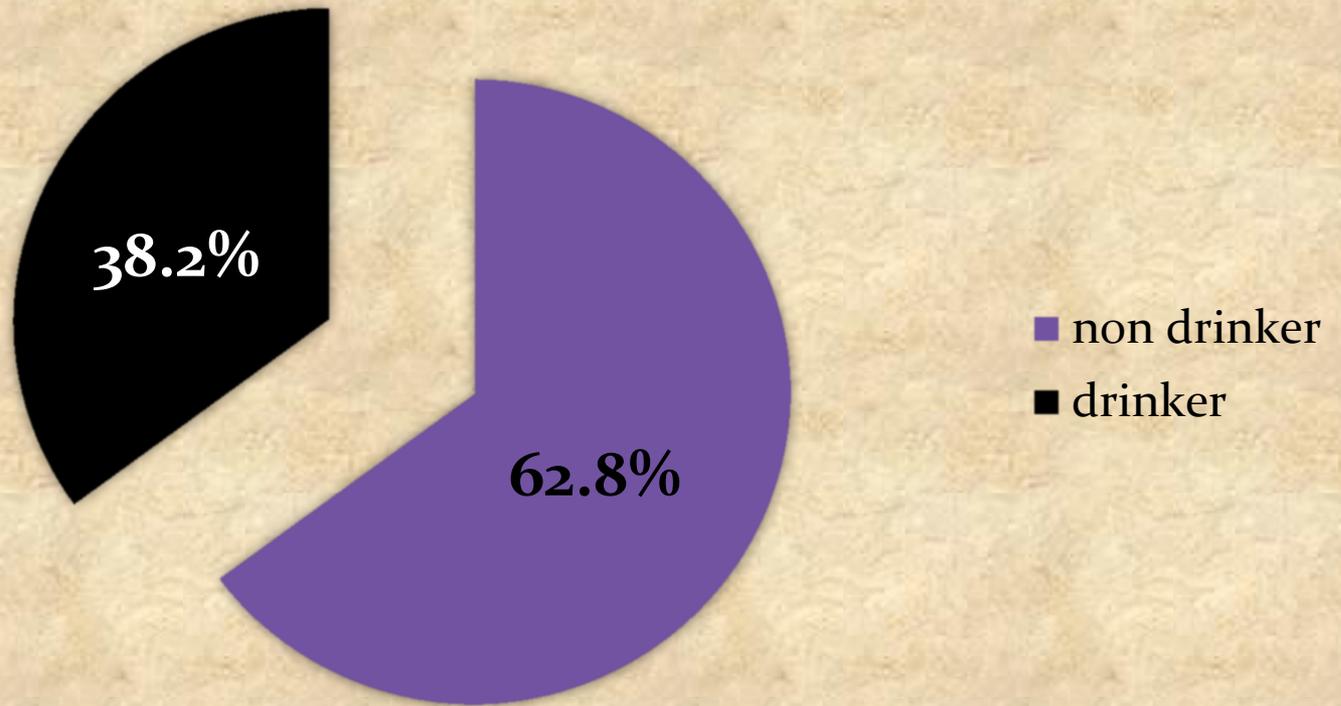

Low score = unfavorable attitude to alcohol

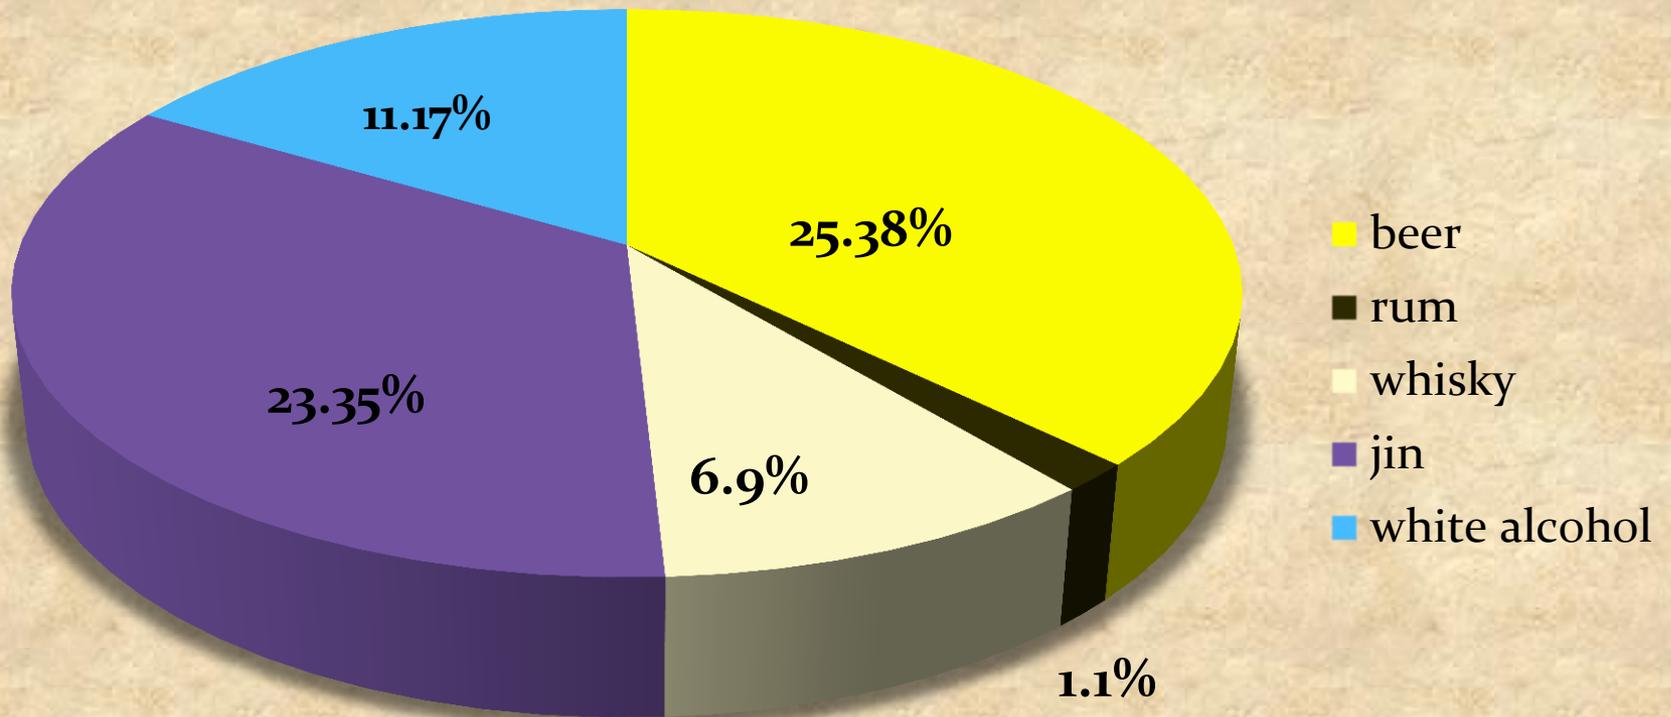

High score = favorable attitude to alcohol

mean score (7)

Student alcohol drinking

Type of alcohol the most frequently used

Association in attitude status and knowledge status

| Knowledge | Attitude | | | | | P value |
|--------------|------------|-------------|-----------|-------------|------------|---------|
| | High | % | Low | % | Total | |
| High | 74 | 64.9 | 40 | 35.1 | 114 | 0.017 |
| Low | 29 | 46.0 | 34 | 54.0 | 63 | |
| Total | 103 | 58.2 | 74 | 41.8 | 177 | |

Association between knowledge and practice of drinking alcohol

| | Knowledge | | | | | P value |
|--------------|------------|-------------|-----------|-------------|------------|------------|
| | High | % | Low | % | Total | |
| Practice | 43 | 65.2 | 23 | 34.8 | 66 | 1.0 |
| Non practice | 71 | 64.0 | 40 | 36.0 | 111 | |
| Total | 114 | 64.4 | 63 | 35.6 | 177 | |

Association between Attitude and Practice

| | Attitude | | | | | P value |
|--------------|------------|-------------|-----------|-------------|------------|-------------|
| | High | % | Low | % | Total | |
| Practice | 32 | 48.5 | 34 | 51.5 | 66 | 0.05 |
| Non practice | 71 | 64.0 | 40 | 36.0 | 111 | |
| Total | 103 | 58.2 | 74 | 41.8 | 177 | |

CONCLUSION

- focused on exploring knowledge, attitude and alcohol drinking among high school students in No. (5), Basic Education High School, Mingalardon, Yangon.
- the students had adequate knowledge and attitude on drinking alcohol

- Significantly associated between knowledge and attitude on alcohol ($P=0.017$).
- association between attitude on alcohol and practice of drinking alcohol ($P=0.05$).
- no association between knowledge and drinking alcohol ($P= 1.0$).
